

# Meet the family

and discover a range of  
new SMART Board®  
interactive whiteboard  
possibilities

Although a large number of schools, colleges and universities have SMART Board interactive whiteboards installed in their classrooms and assembly halls, you may not be aware that the family of SMART Boards have grown.

The SMART Board 400 and 800 have now joined forces with the popular 600 series to give you a family of interactive whiteboards to meet your teaching needs.

As all the series share the same SMART Notebook™ collaborative learning software, this makes it easy for teachers and students to work on the boards without having to learn new software.

The 400 series uses the classic pen and finger based technology that is so well established within education. The 480iv is a ready to go system which comes complete with a SMART V25 short throw projector, integrated speakers and no hassle warranty. The 400 series is ideal for classrooms where you want to engage your students at lowest prices.

The 600 series helps teachers to create, deliver and manage high-impact interactive lessons. Within the series there are integrated short throw projectors/speaker options as well as standard and widescreen options. The 685ix touch recognition can change the way teachers work. You can write, erase, move objects and control applications simply by touching or writing on the board. In fact, if the pen isn't to hand, you can write with your finger.

SMART Board 800 series allows two users to work together. You can use simple, intuitive gestures to flick, rotate or zoom in on objects. There is an advanced pen tray that automatically detects tool modes. The 885ix gives pupils the chance to work at the board in twos and share their learning experience. Your pupils will find it naturally easy using the dual touch gesture control, that it won't seem like they are using a board at all.

## SMART Board® interactive whiteboard family.

400 series:

480iv

600 series:

685ix interactive  
touch or write

800 series:

885ix dual touch

I'm really sold on the SMART Board 480iv. The classic pen and finger based technology is so well established. Packaged as a ready to go system including the highly competitive new SMART V25 projector I only need one 'no hassle' warranty for the entire suite. Best of all the 480iv gets me access to SMART Notebook™, the most powerful and inspiring software for interactive whiteboards. A modern classic; really engaging.

The SMART Board 685ix touch recognition completely changes the way I work – it makes it so easy for me to create, deliver and manage high-impact interactive lessons. Write, erase, move objects and control applications simply by touching or writing. In fact I just start writing with my finger if the pen doesn't come to hand – it's amazing! The sophisticated made simple; totally intuitive.

Now with the SMART Board 885ix we can even work together on the board at the same time!

The SMART Board 885ix really gets me excited about the power of interactive whiteboards all over again. I've always used them at school, but the new dual touch and gesture control is seriously cool. It feels so natural and easy to use. In fact, the interaction is so life like that I forget that I'm using a board! It's a magical experience.
