

# The simplicity of a whiteboard with the power of a computer

# SAMSUNG

With the current trend of schools and colleges moving from interactive whiteboards to interactive touch screens, what are the advantages of the Samsung e-board?

The all in one e-Board solution does not require a separate projector like an interactive whiteboard, this is an advantage for small classrooms with limited space for projector mounts and cabling. The Samsung e-Board also eliminates the problem of loss of light due to the half life of the lamp in a projector, and also does away with the shadow problem which occurs when standing in front of a whiteboard.

The multi purpose features on the Samsung e-board means better video and data clarity during lessons. And by utilising the expansion slot, the e-board is networkable – allowing content to be distributed to students computer screens via the school network.

The Samsung 650TS interactive e-board combines the simplicity of a whiteboard with the power of a computer. The interactive display enhances almost any learning environment, giving better visual presentation, increasing student participation and generally making lessons more efficient.

## Have you considered digital signage?

There is an increased popularity of using digital signage solutions in welcome areas, receptions and all over school and university campus. Samsung MagicInfo Pro is a simple and affordable way to manage display information over a network.

With Samsung MagicInfo Pro you are always in control. It's a dedicated software solution which enables you to broadcast content seamlessly across a local area network (LAN), allowing photos, audio, video and office files to be sent to multiple screens. Unique content can be created for specific screens; a welcome message for the reception area and today's menu in the cafeteria – content can even be scheduled to appear at certain times.

Forming part of Samsung's MagicInfo range of screens, the TSN range incorporates Embedded Touch Panels. These can be used as part of an interactive digital signage solution, bringing all the benefits of digital signage to life with the enhanced touch features. Thus allowing the user to search and display the content they wish to view.

Samsung MagicInfo is sold as a complete 'all in one' solution, including the commercial LCD of your choice, plus all the software you need to get your digital signage network up and running.

On-site pre-sales demonstrations for a requirement of 5+ Samsung LCD screens with in-built MagicInfo Pro digital signage are available for college and universities in the UK. Samsung eBoard can be viewed at Samsung's showroom at Chertsey and Brentford by appointment.
